

Deployment Strategies for Paratransit CASD Systems

Results from a Focus Group in Illinois

Paul Metaxatos
Anthony M. Pagano

Urban Transportation Center
University of Illinois at Chicago

Presented at the 47th Annual Research & Policy Forum
March 23-25, 2006, New York, N.Y.

Overview

- Introduction
- Why Focus Groups?
- CASD Implementation Alternatives
- Focus Group Findings
- Cost Analysis
- Conclusions

Introduction

- CASD systems have shown to improve:
 - dispatching, scheduling, on-time performance, and passenger satisfaction
 - efficiency, effectiveness and quality of service

- However, potential benefits depend on the specifics of CASD system implementation plan and deployment strategy

- The feedback from paratransit providers in developing successful statewide CASD system deployments is a necessary condition

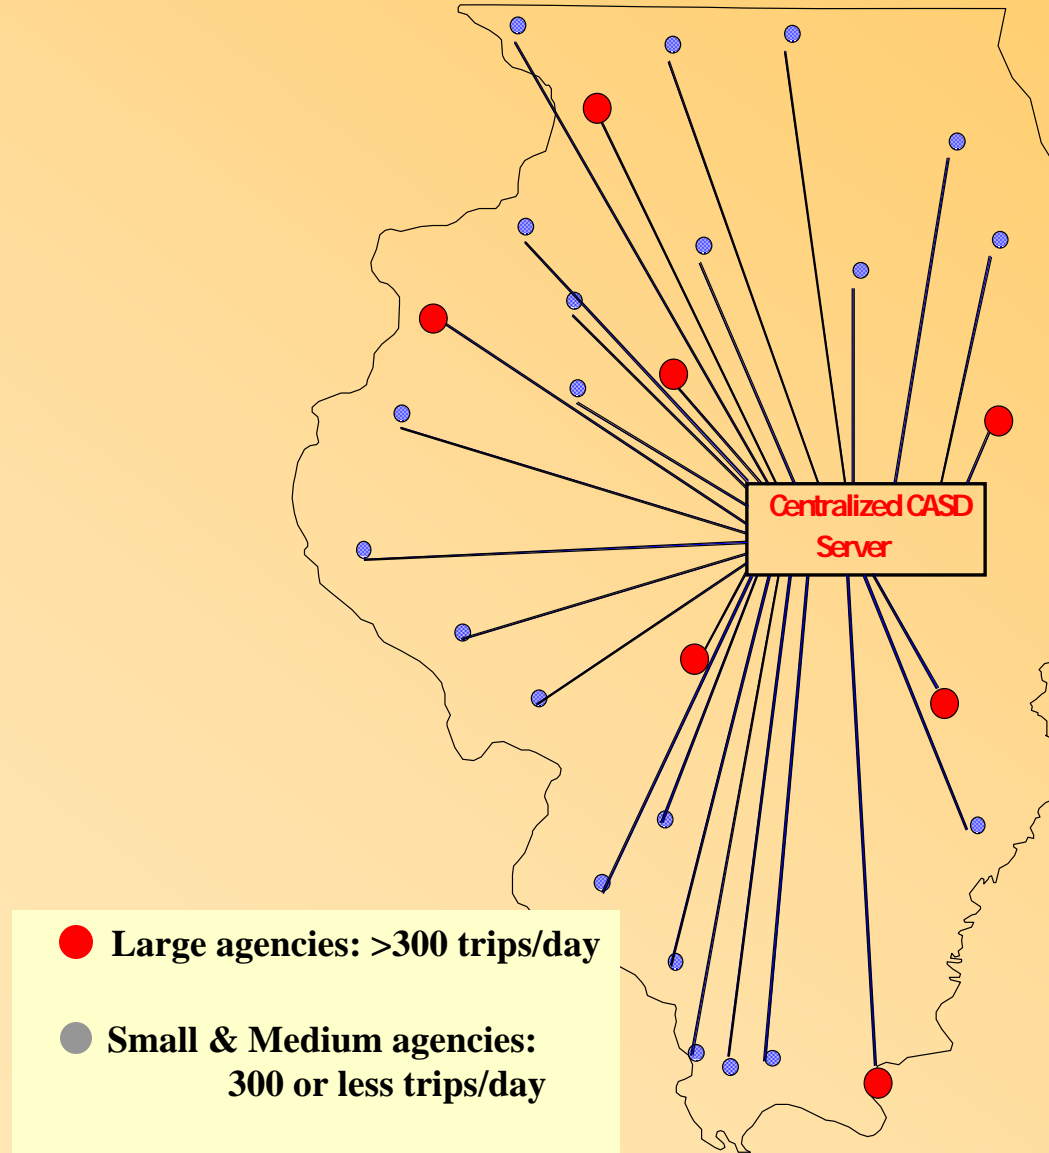

Why Focus Groups?

- Focus groups provide qualitative data that are difficult to quantify
- Focus group dynamics approximate participant interactions in real life

CASD Systems Implementation Alternatives Presented to Focus Group

| CASD Scenario | Hardware | Software |
|----------------------|---|-------------------------------|
| Centralized | One central server serves all operators | One statewide system |
| Decentralized | One server per operator | One or more different systems |
| Regional | One server per region | One or more different systems |

Centralized Approach

Centralized Approach (cont.)

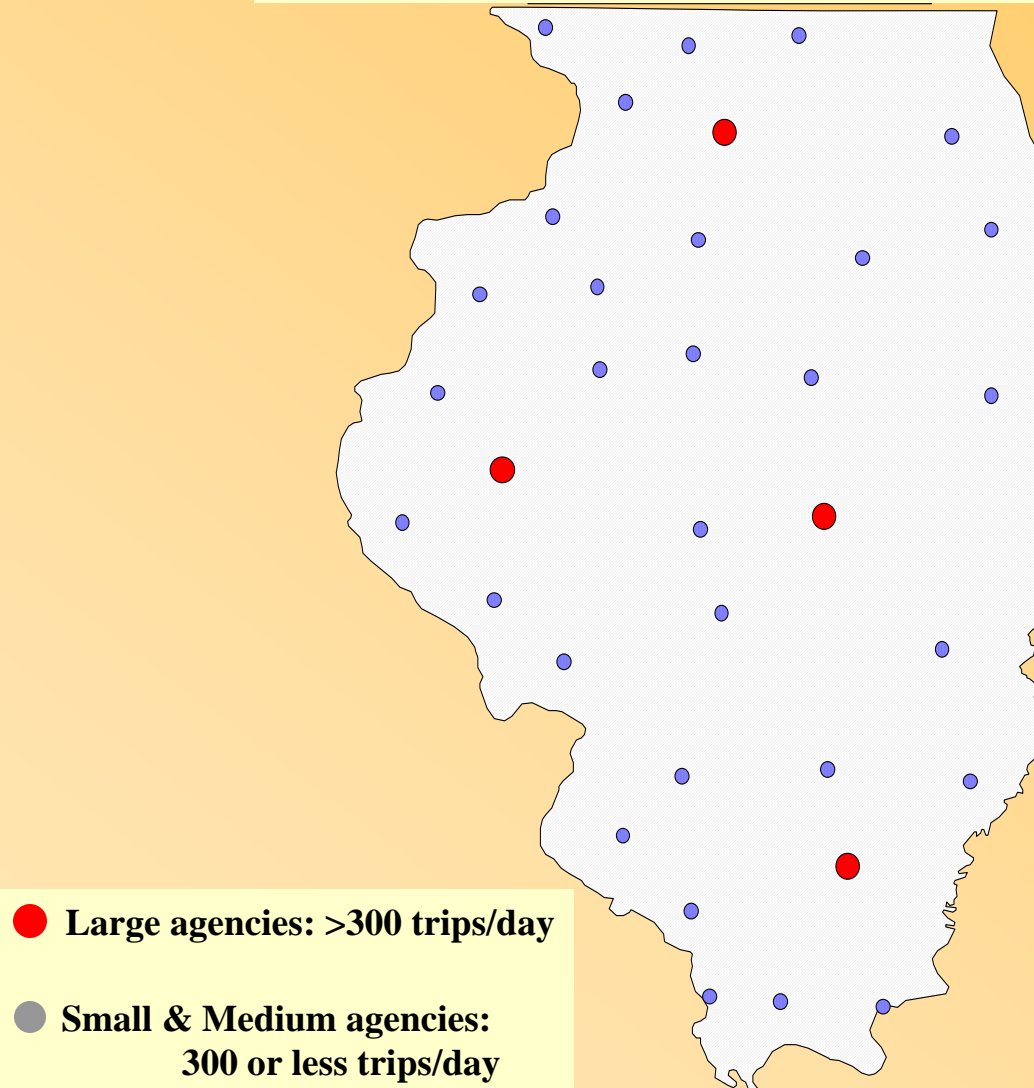

■ Advantages

- Facilitates centralized coordination at the state level
- Lower software costs

■ Disadvantages

- Need for reliable Internet connections
- Fear of losing control of services and operations
- Absence of such statewide implementation (at the time)

Decentralized Approach

Decentralized Approach (cont.)

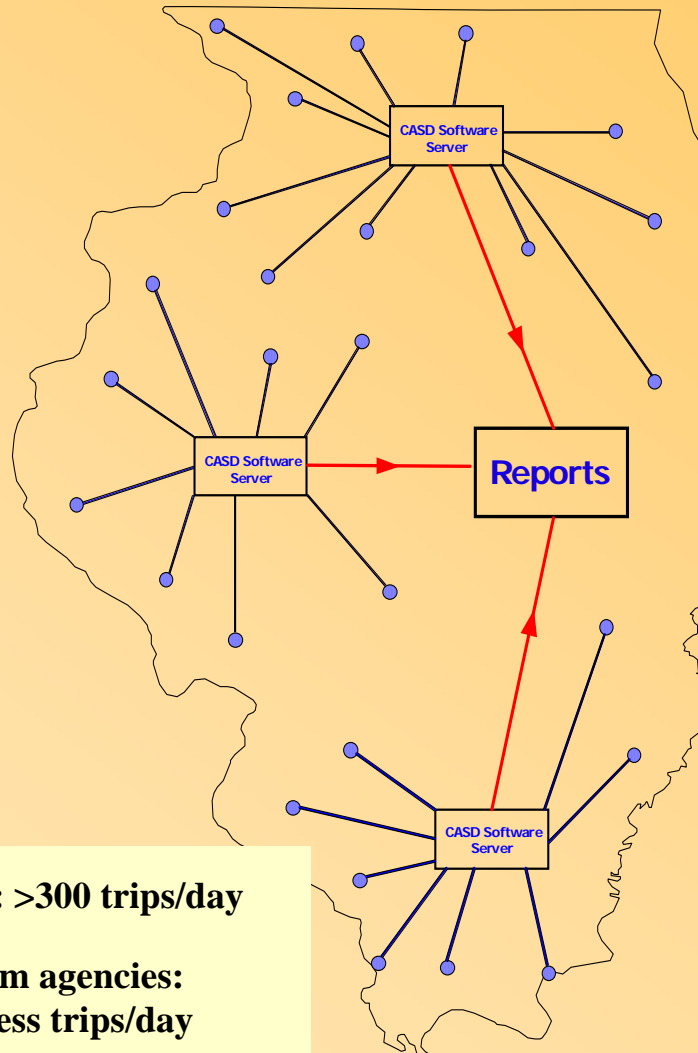

■ Advantages

- Offers strong local control
- No need for high speed Internet connections

■ Disadvantages

- Need for more on-site technical support
- Possibility of multiple standards
- Difficulty to coordinate among multiple providers
- Increased ownership costs

Regional Approach

CASD Software Server

Large agencies: >300 trips/day

**Small & Medium agencies:
300 or less trips/day**

— Internet connection (operations)

↔ Internet connection (reporting)

.....
ms: Results from a Focus Group in Illinois

Regional Approach (cont.)

■ Advantages

- Little worry about maintaining and updating software and hardware
- Facilitates monitoring of contract performance by State DOT
- Facilitates implementation of brokerage
- Proximity to client facilitates maintenance, training and service of client software

■ Disadvantages

Communication needs less than centralized but more than decentralized approaches

Focus Group Findings

- CASD systems functionalities in use or desired:
 - scheduling and dispatching rides (manual/automated)
 - additional software (AVL and MTD)
 - useful functionalities (client registration, scheduling, billing, trip booking, dispatching, and reporting)
 - coordination
 - willingness to act as a brokerage (software and perception barriers)

- Comments on centralized approach:
 - perception (insensitive to local needs)
 - concerns (implementation difficulties in rural areas)
 - willingness to participate (low)

Focus Group Findings (cont.)

- Comments on decentralized approach:
 - perception (difficult to customize, problematic technical support)
 - concerns (costs and expertise)
 - willingness to participate (strong from smaller operators)

- Comments on regional approach:
 - perception (positive reaction, uncertainty about costs)
 - concerns (funding, sustainability, implementation details, software issues)
 - willingness to participate (strong)

Focus Group Overall Findings

- Centralized approach too difficult for smaller agencies
- Fear of losing control triggers desire to as much decentralization as possible
- Decentralized approach is most desired but with standardization
- Fear of half-way implementation
- State DOT should pay for software, hardware, implementation, technical support, contractual support with vendor

Implementation Issues

- Carefully plan and execute entire process
- Support robust technology and transition process
- Agencies need full financial support by State DOT to participate in a statewide CASD deployment
- Favor a less centralized approach
- Provide continuous training
- Explore additional technology (MDT, AVL, PDA, etc.)

Cost Analysis – Initial Costs

Decentralized

| | Trips / Day | Software Type | Hardware Price | Software Price | Data Conversion | | Support Person (On-site) | Maintenance Price | Training | | Total Cost of Ownership |
|--------------|-------------|-----------------|----------------|----------------|-----------------|---------------|--------------------------|-------------------|--------------------|---------------|-------------------------|
| | | | | | Person/ Month | Cost | | | Windows / Internet | CASD software | |
| Large 1 | 600 | Fully Automated | 3,000 | 75,000 | 4 | 7,680 | 65,280 | 1,500 | | 10,500 | |
| Large 2 | 500 | Fully Automated | 3,000 | 75,000 | 4 | 7,680 | 65,280 | 1,500 | | | |
| Medium 1 | 200 | Semi Automated | 2,500 | 25,000 | 2 | 3,840 | 11,520 | 500 | | | |
| Medium 2 | 300 | Semi Automated | 2,500 | 25,000 | 2 | 3,840 | 11,520 | 500 | | | |
| Medium 3 | 30 | Semi Automated | 2,500 | 25,000 | 2 | 3,840 | 11,520 | 500 | | | |
| Medium 4 | 60 | Semi Automated | 2,500 | 25,000 | 2 | 3,840 | 11,520 | 500 | | | |
| Small 1 | 90 | Custom database | 1,500 | 10,000 | 1 | 1,920 | 0 | 200 | 300 | | |
| Small 2 | 30 | Custom database | 1,500 | 10,000 | 1 | 1,920 | 0 | 200 | 300 | | |
| Total | | | 19,000 | 270,000 | | 34,560 | 176,640 | 5,400 | 600 | 10,500 | 516,700 |

Regional

| | Trips / Day | Software Type | Hardware Price | Software Price | Data Conversion | | Support Person (On-site) | Maintenance Price | Training | | Total Cost of Ownership |
|--------------|-------------|-----------------|----------------|----------------|-----------------|---------------|--------------------------|-------------------|--------------------|---------------|-------------------------|
| | | | | | Person/ Month | Cost | | | Windows / Internet | CASD software | |

Cost Analysis for Statewide CASD Implementation for Decentralized and Regional Approaches

Summary of Findings

- Several assumptions regarding training, staffing, hardware and software costs
- The cost of a decentralized implementation for a typical agency (not too large, not too small) was found to be about \$65,000 initially (first year) and \$25,000 annually thereafter (2000 dollars).
- The respective costs for the regional approach were about \$60,000 initially and \$18,000 annually.
- Regional approach could potentially save more than \$10,000 per agency per year on average. This amounts to more than \$300,000 savings per year for the 30 5311 providers in Illinois.

Conclusions

- Overcoming perceptions and fears is critical for a statewide CASD system implementation in Illinois
- A hybrid (regional) implementation seems to be favored by agencies
- Implementation costs could be substantial
- Selecting a more cost-effective implementation strategy could offer substantial savings
